Professional Summary

Computer Science undergraduate with six months of professional experience at Munshot and skills in full-stack development using React, Node.js, Express.js, JavaScript, Python and FastAPI. Experienced in building REST APIs, responsive interfaces and database-backed applications, with knowledge of the MERN stack, PostgreSQL, SQL, DBMS and system design.

Education

Bennett University Aug 2024 - Expected 2028
B.Tech, Computer Science and Engineering - CGPA: 8.78

Experience

Munshot Apr 2026 | 6 months, completed
Agentic AI Developer

- Built Python backend APIs and production agentic workflows for document processing, query routing and output validation; added requirement-aware routing and edge-case handling to reduce extraction errors by 18%.
- Developed a PDF-report pipeline for extracting and validating structured KPIs, achieving 92% extraction accuracy and supporting downstream AI workflows.
- Optimized multi-step LLM workflows and query-routing endpoints, reducing end-to-end latency by 25% and improving throughput by 30%.
- Built monitoring dashboards for extraction accuracy and failure patterns across 500+ daily pipeline runs, reducing mean time to detect regressions by 40%.

Projects

Relay - Real-Time Messaging Platform | *React, Next.js, FastAPI, SQLAlchemy* GitHub

- Built a responsive React/TypeScript interface and Python FastAPI backend for persistent direct and group messaging, contact search, typing indicators, online presence and delivery/read receipts.
- Implemented REST APIs, authenticated WebSocket delivery, hashed session tokens in HttpOnly cookies and group-admin authorization; used SQLite, SQLAlchemy and Alembic for relational persistence and migrations.
- Added idempotent message sends using client-generated IDs; deployed with Docker Compose and HTTPS on an Azure Linux VM, including health checks, persistent storage, backups and GitHub Actions validation.

Loop - AI Website Builder | *React, TypeScript, FastAPI, SQLite* GitHub

- Built a full-stack workspace with private accounts, saved projects, responsive sandboxed previews and HTML downloads; connected the React interface to FastAPI APIs and database-backed project history.
- Implemented a persistent background-job queue for planning, generation and evaluation; queued jobs survive restarts, while interrupted runs retain saved drafts and support cancellation between stages.
- Added password hashing, session authentication, per-user ownership checks and versioned profile rollback; configured Docker deployment and CI for Python tests, TypeScript builds and browser workflows.

VersitySync | *FastAPI, Supabase, Redis, LangGraph, WebSockets*

- Lead a six-person team building a student career-readiness platform selected for multiple competitions, with interview practice at the core of its career-preparation experience.
- Built real-time interview sessions with voice transcription, interruption handling and adaptive follow-ups across general, role-based, company-style and coding interview modes.

Vehicle Insurance Prediction | *Python, FastAPI, Docker, AWS* GitHub

- Built a modular six-stage ML pipeline and containerized FastAPI model serving; automated Docker image builds and pushes to Amazon ECR through GitHub Actions.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, Java, C, C++
Full-Stack & APIs: React, Next.js, Node.js, Express.js, MERN Stack, FastAPI, REST APIs, JSON, WebSockets
Databases: PostgreSQL, SQLite, SQLAlchemy, Alembic, Supabase, MongoDB, Redis
Development & Delivery: Git, GitHub Actions, Docker, Docker Compose, CI/CD, AWS, Azure, API testing, debugging
AI Engineering: LangGraph, LangChain, RAG, agentic workflows, model evaluation, Scikit-Learn
CS Fundamentals: DSA (400+ problems), OOP, DBMS, Operating Systems, System Design

Leadership & Achievements

NLP Department Lead - Artificial Intelligence Society, Bennett University
Tech Team Co-Head - CodeChef Bennett
1st Place - SmartBU Hackathon 2025 (BU-SIH), Bennett University
